**High Performance Finish for Eurocork Uniclic Flooring
Newest finish breakthrough in cork flooring**

Europlex is proud to present the most innovative **High Performance Coating UV** finishing system for cork floorings: The **WEARTOP** finish.

Using new, state-of-the-art resins which are extremely elastic and advanced nanoparticle technology, **WEARTOP** finish offers unprecedented performance and an outstanding appearance. Coating hardness and abrasion resistance are not achieved at the expense of flexibility. Furthermore, **WEARTOP** offers optimal micro-scratch resistance. Rubbing the surface with steel wool has negligible effect and no black marks are formed when the surface is scratched with a metal object. The resistance to scratches and sanding marks caused by hard dirt particles and sand is remarkably high, making **WEARTOP** the perfect coating for our everyday needs.

In contrast to anti-abrasive top coats with ceramic/aluminum oxide, **WEARTOP** can be sanded and is therefore easy to re-coat. The optimal balance provided by **WEARTOP** allows the cork floorings to continue to be easily cleaned and maintained. Furthermore, due to the advanced nanoparticle technology, the cork surface will have an outstanding appearance: **smooth, warm, deep-clear and natural.**

WEARTOP is completely stain resistant through higher chemical resistance and carries a **10 year commercial warranty.**

Please note no additional sealer or coating is required

One major ecological benefit of **WEARTOP** is that only reactive products are used: this means that it is solvent free and especially environmental friendly. There are no organic solvents and no VOC emission during processing, facilitating compliance with stringent environmental regulations. **WEARTOP** is free of heavy metal, formaldehyde and insecticides/pesticides.
